WELCOME PVUNL AS OUR PLATINUM SPONSOR !

We are proud to welcome **Patratu Vidyut Utpadan Nigam Limited (PVUNL)** as the **Platinum Sponsor of Team Srijan**.

PVUNL is a joint venture between **NTPC Limited** and **Jharkhand Bijli Vitran Nigam Limited (JBVNL)**, established to strengthen the power infrastructure of Jharkhand. With a mission to provide **reliable and affordable power** in the most efficient and environmentally responsible manner, PVUNL plays a vital role in driving **sustainable industrial and regional growth**.

Their vision of becoming an efficient and sustainable power generator contributing to the development of Jharkhand and the nation resonates strongly with our commitment to engineering excellence and innovation in Formula Student.

The support from PVUNL will directly enhance our vehicle manufacturing, component procurement, and overall development process, enabling us to compete at the highest level with greater confidence and precision.

We sincerely thank PVUNL for believing in our vision and supporting young engineers in their pursuit of technical excellence.

TSI 26 DESIGN PROCESS COMPLETED !

In January, we successfully completed the full vehicle design and later on completed the **CAD assembly** of the race car. After multiple design iterations, and internal reviews, all subsystems were fully integrated to ensure optimal packaging, and compliance with regulations.

With the design phase concluded, our focus shifted toward vendor selection, **procurement of components**, and **manufacturing planning**. Efforts were directed toward finalizing suppliers, optimizing cost, and preparing timelines to ensure a smooth and efficient transition into the **build phase**.

PROCUREMENT AND MANUFACTURING PROGRESS

Following the completion of the design phase, the team initiated the procurement process by floating multiple quotations and conducting detailed vendor evaluations.

After careful comparison based on **cost, quality, and lead time**, vendors were finalized for the machining of key vehicle dynamics components including wheel hubs, uprights, bell cranks, and other critical parts. The **machining order** for the **pedal assembly** has also been placed.

All components are currently under manufacturing and are expected to be dispatched by mid-March.

CHASSIS MANUFACTURING INITIATION & LASER TUBE NOTCHING

For the chassis, raw tubes were ordered and directly delivered to our **Magod Lasers** for precision laser cutting. The **laser-cut tubes** have now been received, marking a **major step** forward toward **chassis fabrication**.

As we enter March, the team is fully focused on initiating chassis manufacturing, with completion targeted by **20th March**.

FINAL EVALUATION & SUBTEAM DIVISION OF K25 BATCH

The **final evaluation** of the **K25 batch interns** marked the completion of their training phase with Team Srijan. Over the past few months, they actively participated in technical sessions, assignments, and team activities, strengthening their **practical** and **conceptual skills**.

Based on their **performance** and **consistency**, selected interns have been officially inducted as team members and allocated to respective subteams according to their strengths and team requirements. They will now contribute directly to the **design** and **development** of our **Formula Student car** for the upcoming season.

FUNDING PROGRESS AND A REQUEST

Alongside technical development, the team is actively working to fulfill the season's budget requirements. Through structured planning and outreach to industry partners, efforts are being made to secure resources for manufacturing, procurement, testing, and competition participation.

Support from alumni and well-wishers associated with reputed organizations would be sincerely appreciated in terms of **recommendations** of the **team's proposal** or **connections** to the appropriate **decision-makers** for **partnership discussions** would significantly strengthen our journey toward competing at the highest level.

BACK IN THE GARAGE

This January, we welcomed back our ex-captain, **Harsh Agarwal Bhaiya (K20 batch)**.

The whole team got to interact with him, he took us out for a lunch, and he shared some great stories from his manufacturing days. Hearing his experiences was the perfect motivation as we head straight into our **manufacturing phase!**

Full Throttle Ahead !

Every component we design reflects dedication, discipline, and drive.

As challenges grow tougher, so does our determination, optimizing systems, enhancing reliability, and pushing ourselves beyond the limits.

This is not just **engineering**.

This is **Revving Passions**.
