MANUFACTURING UPDATES

CHASSIS MANUFACTURING COMPLETION

Building on our previous progress, the chassis manufacturing phase has been successfully completed. Laser-notched tubes were received from our sponsor Magod Lasers, ensuring high precision and accuracy in tube profiles.

To achieve dimensional accuracy during fabrication, MDF fixtures were designed and assembled in-house. The chassis tubes were carefully positioned and constrained on these fixtures, allowing for proper alignment prior to welding.

Following this, the complete chassis was welded, marking a major milestone in our vehicle build. This step represents the transition from design to a fully realized structural framework, forming the backbone of our race car.

PARTNERSHIP FOR **MOULDS**

We are proud to announce a partnership with SN Enterprises and Moulds for the development of our aerodynamic moulds. With their support, the manufacturing of key aerodynamic components has progressed significantly.

The moulds for the nosecone, sidepods, and seat have been successfully completed and are currently in transit. These are expected to be delivered by coming week. It is a crucial step toward realizing our composites package.

SPONSOR SPOTLIGHT

KUNDAN LAL AND SONS **SILVER SPONSOR**

KUNDAN LAL AND SONS
MANUFACTURES & ENGINEERS

We are proud to continue our long-standing association with Kundan Lal and Sons, whose consistent support has significantly strengthened our manufacturing capabilities, especially in the drivetrain domain. Their trust reflects a shared commitment to engineering excellence and innovation.

Kundan Lal and Sons is a leading manufacturer of sprockets, gears, and spline shafts, offering customizable solutions across automotive, industrial, and agricultural sectors. Based in Ludhiana, they leverage strong infrastructure, skilled teams, and reliable supply networks to maintain a solid industry reputation.

We sincerely thank **Kundan Lal and Sons** for being a valued partner in our journey toward building a competitive Formula Student car.

RECEIVING MACHINED PARTS

The team has received a major batch of precision-machined components, marking strong progress in the manufacturing phase and the transition from design to subsystem development. All parts meet strict design specifications, ensuring reliability and performance.

The batch includes wheel hubs, bell cranks, differential uprights, half shafts, axle stubs, a double universal joint, and the machined brake, accelerator, and clutch pedals, critical to the drivetrain, suspension, and control systems. With these components in hand, the team is ready to begin subsystem assembly and integration, moving closer to a fully functional race car.

FROM THE GARAGE

WORKSHOP RENOVATION

To enhance our working environment and improve efficiency during the manufacturing phase, the team undertook a complete renovation of the workshop. The space was revitalized with fresh paint across the facility, creating a cleaner and more organized workspace. Additionally, new lighting fixtures and fans were installed to ensure better visibility and ventilation, enabling longer and more productive working hours. This upgraded workspace now provides an ideal environment for precision manufacturing and team collaboration.

TEAM UPDATES

SECOND **RECRUITMENT** OF **K25's**

*Welcome to
the Team!*

Following the successful integration of the initial K25 batch, the team conducted a second round of recruitment to bring in fresh talent. This phase focused on identifying motivated individuals with a strong willingness to learn and contribute to the team's demanding workflow.

The newly recruited members have begun their training through structured sessions, hands-on tasks, and mentorship from senior team members. This continuous expansion ensures a sustainable team structure, allowing knowledge transfer and strengthening all subteams for the upcoming season.

WHAT'S NEXT?

ROAD TO SUPRA SAE 26 & FB 27

Key work now shifts to the composites phase, where fabrication and integration of the seat, nosecone, and sidepods remain. Moulds are in the final stage of manufacturing and are expected to arrive shortly.

While unavoidable vendor delays have pushed us behind our initial timeline, the team is fully focused on recovering lost ground. Our immediate goal is to achieve a fully scrutiny-ready and rule-compliant car before moving to the running phase. This will be followed by rigorous on-campus testing and sessions at Khelgaon parking area to fine-tune performance and reliability.

With end-semester exams concluding, the entire team will remain on campus and work intensively to complete manufacturing. Parallely, strong emphasis will also be placed on static event preparation to maximize overall competition performance.

Preparations are also underway for the Formula Bharat Rulebook Quiz (14th June) and SUPRA SAE 2026 documentation (end of June), as we continue progressing toward delivering a competitive and well-rounded car.

Thank you !

FOR BEING A PART OF OUR JOURNEY .

Final Note :

To close, we want to leave you with some lines from Matt Brown that resonate with all of us:

"Our quest was one of racecars, and it is the same story for anyone who has ever been a part of a Formula SAE team. We get addicted. We can't help it. It is part of our love for engineering and our drive to be the best. People wonder why we are obsessed and we wonder why they are not. Someone asks us why we spend 70 hours a week building a racecar and we just look at them like a dog looks at a mime.

Why? What do you mean, why?

Because Racecar

That's why."
